14 JAN 1972

MEMORANDUM FOR: Executive Director-Comptroller
THROUGH : Deputy Director for Support
SUBJECT : Semi-Annual Report of Records Management Board

1. This report is for your information only.
2. During the past six months the Records Board has addressed itself to three principal areas: (a) Control of Records Storage Growth, (b) Development of Retention Plans for Permanent Records, and (c) Increased Use of Microfilm Systems.

3. In those areas the progress and problems are as follows:

a. Control of Records Storage Growth:

During this first six months of the new Limited Storage Policy all Directorates are within their projected annual storage limits at the Records Center. Many components have managed to reduce their net holdings. In a related development to control records volumes in the offices more stringent restraints have been placed on requests for records equipment. Senior Officers in each Directorate are monitoring this effort.

b. Development of Retention Plans:

Component efforts continue toward completing the identification of permanent records and to designate the offices responsible for the permanent control of those records (office of record).

Implementation of both the Storage Limitation Policy and Record Retention Plans were the subjects considered at the two-day Conference of Records Officers in December. Several new proposals to implement the plans were developed. We expect completion of Retention Plans in several components during the next six months.

SECRET

c. Increased Use of Microfilm Systems:

Each Directorate reports new microfilm systems being established.

In the Support Directorate a systems analyst position has been established and an officer assigned full time in the Support Services Staff to work exclusively on Agency microfilm activities. A consultant on microfilming has been brought in six times during the reporting period to spend a total of 16 days on Agency microfilm systems analysis and applications. In the past year the consultant has conducted three microfilm information seminars and two special training sessions on microfilming systems. At the special sessions were 14 DDS office heads, deputies, and executive officers; 13 managerial personnel from other directorates and the DCI area; and 51 DDS managerial personnel. For the three regular seminars we had 100 people attend: 7 from the DCI area, 16 from the DDI, 17 from the DDP, 44 from the DDS, and 16 from the DDS&T. Additional sessions are scheduled for the week of 17 January and others are being planned.

Significant progress was made in the Office of Finance microfilming program permitting the destruction of 300 feet of old paper records. Similarly, microfilm projects are being developed in the Offices of Communications, Logistics, Medical Services, Personnel, Security, and Training.

25X1A

The DDP reports that during this reporting period approximately 400 feet of old applicant files were microfilmed and the files destroyed. Forty feet of files at [REDACTED] were converted to film and the hard copy destroyed as part of a pilot microfiche program. Other microfilm studies are underway in [REDACTED] as well as for the [REDACTED] at Headquarters.

25X1A

25X1C

25X1C

In the DDS&T microfilm activities were reported in seven components and in this period they involved disposal of another 28 feet of files, the leasing of a high-speed rotoline camera to film some 400 cubic feet [REDACTED] during the coming year, and purchase of reader/printer equipment for the Office of Special Projects.

SECRET

In the DCI Area the Cable Secretariat reports having completed the microfilming of all its cable files except those of the last six months. To date about 500 feet of cable files were destroyed as a result of this microfilm application.

The Board notes the rapidly increasing volumes of magnetic tapes, NPIC films, collections of microfilm files, and other non-paper records of various kinds for which storage policy and systems will have to be developed.

4. Besides those principal activities of the Board the Directorates also report developments in other related areas which provide a general picture of the Records Program activities. A summary of these developments are attached for your information.

5. Finally, the Records Management Board evaluated its own status and future as follows:

- a. Three members (representing DDI, DDS, and DDS&T) favored continuing the Board because they consider the records purge and study of other records problems to be continuing requirements for Board action. They also feel the Board strengthens their administration of their Directorate Programs and increases the responsiveness of their component Records Management Officers.
- b. The DDP representative favors using the chain of command to manage the Agency Records Program. The DCI representative feels the Board charter and membership should be re-constituted because it gives the impression of a greater problem solving mechanism than actually is possible in this Board without any staff or authority.
- c. The Chairman recommends continuation of the Board because it is required to report to the Executive Director-Comptroller on Records Program problems and progress and this, he feels, has stimulated greater coordinated Program participation at all organizational levels.
- d. Although the majority favors continuation of the Board, the members concluded that the final decision rests with the Executive Director-Comptroller based upon the needs of the DDS who is charged with responsibility for the overall Agency Records Program,

Chairman

CIA Records Management Board
